PROFESSIONAL SUMMARY

Full-stack software engineer with nearly four years of experience shipping production apps for a UK client in Java, Spring Boot and Angular, including a life-insurance app used by 10K+ people. Now building AI tools in Python with LangGraph and the Anthropic API.

TECHNICAL SKILLS

- **Languages**: Java, Python, TypeScript, JavaScript, SQL
- **Backend**: Spring Boot, REST APIs, JWT, Node.js
- **Frontend**: Angular, Ionic, React, HTML5, CSS3
- **AI**: LangGraph, LangChain, Anthropic API, LLM, Prompt Engineering
- **Data and DevOps**: MongoDB, Docker, GitLab CI, Jenkins
- **Testing & Tools**: JUnit, Jest, Jasmine, Karma, Git, Postman, Figma

PROFESSIONAL EXPERIENCE

System Engineer | Tata Consultancy Services | *Pune, India* Nov 2020 - Jul 2024

- Shipped features for a UK client's life-insurance mobile app, working from India as a core frontend developer (Angular, Ionic, TypeScript); the app has 10K+ active users in a regulated industry.
- Took over releases for about a month when the tech lead was away, led the team through releases and security audits, and kept that responsibility after the lead returned.
- Led a frontend team of 4 engineers through final-year delivery with code reviews, pair programming and onboarding docs.
- Designed a reusable full-stack framework (project layout, login setup and shared UI components) that 2 more client teams adopted.
- Wrote Java Spring Boot endpoints for the mobile app (JWT login tokens, MongoDB queries) and co-built the daily reporting endpoints behind an automated Excel report of 10 to 15 sheets for hundreds of users.
- Integrated 30+ REST APIs into the Angular app and tested them in Postman, with JWT login, route guards and session handling.
- Moved releases from manual steps to GitLab CI and Jenkins pipelines across development and staging.
- Recognized with 8 TCS awards, including Star of the Month, Star of the Quarter, Star Team and 5 On the Spot.

AI Fellow (part-time) | Handshake AI | *Remote* Oct 2025 - Nov 2025

- Red-teamed large language models by writing prompts designed to make them fail on algorithm and math problems.
- Documented each failure with the prompt, the model's answer and what was wrong.

Lead Software Engineering Intern | Shifting Waters Leadership Institute | *Richmond, VA* Jul 2025 - Sep 2025

- Built the organization's web platform on WordPress with custom HTML and CSS, designed in Figma, as its only technical owner.
- Set up Google Analytics and automated workflows with Make.com, such as sending web-form entries to spreadsheets.
- Reached Lighthouse scores of 91 for accessibility and 92 for SEO.

TECHNICAL PROJECTS

Job Search & Resume Pipeline | GitHub Mar 2026 - Present

Python, LangGraph, LangChain, Anthropic API

- Built a 6-node LangGraph pipeline that tailors a resume and cover letter to each job posting.
- Kept scoring under a cent per posting by running free checks first (a cache of past postings and red-flag rules), then Claude Haiku, with Groq and Ollama as backups; Claude Sonnet writes the final text.
- Checked every generated bullet against the original resume so nothing is invented, at about 9 cents per tailored application (measured from billed tokens on real runs).

Zero-Knowledge Password Authentication | GitHub Jan 2025 - May 2025
Circom, SnarkJS, Node.js, React

- Built a login where the server verifies a zero-knowledge proof and never receives the password.
- Wrote the proof circuit in Circom, generated proofs in the browser with SnarkJS and React, and verified them on a Node.js server.

Task Vector Composition | GitHub Jan 2025 - May 2025
PyTorch, HuggingFace, BERT

- Fine-tuned BERT-base separately on SST-2 and CoNLL-2003 NER, then merged the two task vectors into one model with scaled averaging and no joint training.
- Measured the trade-off between tasks: the merged model kept most of the SST-2 accuracy (87% vs 92% for the separately fine-tuned model) but lost ground on NER (74% F1 vs 89%).

Personal Budget Management System | GitHub Aug 2025 - Dec 2025
Python, PyQt6

- Built a Python desktop budgeting app with a team of 4 that sorts bank-statement CSV transactions into spending categories and charts where the money goes.
- Wrote the main window, user accounts, and the login, dashboard, profile and transactions pages in PyQt6.

EDUCATION

M.S. Computer Engineering Aug 2024 - May 2026 (Completed)
Virginia Tech, Blacksburg, VA | GPA: 3.78/4.0

Coursework: Reinforcement Learning, Deep Learning, Machine Learning, Computer Vision, Information Security, Large-Scale Software Development, Brain-inspired Computer Architecture

B.E. Computer Science and Engineering Aug 2017 - Aug 2020 (Completed)
Prof. Ram Meghe Institute of Technology & Research, India (affiliated to SGB Amravati University)

Coursework: Data Structures and Algorithms, Programming Languages, Operating Systems, Networking, Database Management Systems
